

Prioritised product groups in the BASTA-system

To most developers and contractors it is not so easy to judge the content of a product and if the content is hazardous to the environment and to health. Not until you know that, there is a reasonable chance to select products also taking environmental concerns.

The BASTA-system has been developed with this in mind. The whole Swedish construction sector has adopted the clear definition of such particularly hazardous substances that should not be present in products used in building of a sustainable society.

Based on this definition it is now possible for materials suppliers to inform the market about which products are free from hazardous substances, by registering them in the database of the BASTA-system. The system is open to all kinds of construction products, but it is certainly more important that the suppliers of certain product groups urgently inform the market about which products are free from the hazardous substances, by registering them in the database.

Following products groups are of extra importance and we recommend all users of the BASTA-system to pay extra attention when using products in any of these groups. If you do not find the product that you intend to use in the database, we recommend you to look for alternative products or to contact the supplier to urge him to get the product registered in the database.

01 Building materials

- 010 Bonding agents and Mortar
- 012 Sheet material
- 013 Insulation material
- 014 Sealing systems, tape and weather strip
- 016 Roof- and wall cladding
- 017 Chemicals

02 Wood products

- 020 Pressure impregnated

03 Decoration materials and Paint

- 030 Ceramic goods
- 031 Floor coverings
- 032 Wallpaper
- 033 Suspended ceiling and wall construction systems
- 034 Paints and wood finishes

04 Interior and Joinery products

- 040 Doors
- 041 Windows and glazed building elements
- 042 Kitchen joinery
- 043 Bathroom fittings

18 Electrical equipment

- 183 Electrical installation materials

20 Heating, Ventilation and Sanitation items, Water supply and drainage items

- 200 Boilers, pumps and floor traps
- 201 Bath, shower, WC and washing up
- 202 Pipes valves, joints and fittings
