Welcome to the BASTA Logbook

The BASTA logbook is a digital tool available to e.g. property owners, property managers, contractors, and architects to document the articles used in new buildings, reconstructions, as well as during the maintenance of premises, buildings, and facilities.

The BASTA logbook is connected to BASTA's article database which contain environmentally evaluated articles regarding chemical content. The database provides the users with practical guidelines regarding the selection of safe and quality-assured articles. The articles in the BASTA article database meets different grades regarding the chemical composition, read more about the BASTA system at [BASTAonline](#).

The logbook enables:

- A systematic approach to the selection of articles
- A quality ensured control of articles to achieve non-toxic construction
- A meeting of the system requirements in the environmental certifications of buildings e.g. Miljöbyggnad, BREEAM-SE and LEED.

The logbook enables the user to:

- Administer articles connected to a project (logbook)
- Secure that an article meets the requirements of selected grade, e.g. the ALFA, BETA or DECLARED
- Get overall project (logbook) information through the insight feature
- Gain insight into the article distribution between grades in a project (logbook)
- Upload and save relevant product- and project documentation
- Create and manage deviations regarding article choice
- Check if an article has been used in multiple projects (logbooks) through the database search engine.

Set-up of the BASTA Logbook

The BASTA logbook consists of three levels: organization/user, workspace, and project (logbook). The logbook is administered in BASTA's web service that can be reached through our website.

Organization/user

The organization/user is the customer towards BASTA and is responsible for payment of the service.

Workspace

A workspace is a common space for a business to manage all projects (logbooks) and users. The workspace is connected to an organization/user. A workspace can "own" one or more projects (logbooks).

There are three kinds of workspaces:

- Organization Plus Workspace
- Organization Workspace
- Educational Workspace
- Personal Workspace

Organization Plus Workspace

In "Organization Plus Workspace", an organization can collect, administer and overview all its projects (logbooks) and its articles. The workspace can have up to 50 journals at a fixed price that are billed once a year. The workspace can have unlimited members and articles.

Organization Workspace

In the "Organization Workspace", an organization can collect, administer and overview all its projects (logbooks) and its articles. Fee is paid per logbook and for 12 months at a time. The workspace can have an unlimited number of projects (journals), members, and articles.

The user who creates the workspace will automatically be assigned the role "Super Admin" and will be able to invite more users to the workspace, as well as assign different roles to these users, for more information about the different roles see further below.

Educational Workspace

The "Educational Workspace" is aimed at schools and students wishing to use the BASTA logbook for an educational purpose.

Personal Workspace

The "Personal Workspace" is aimed at private users who within the workspace can create two projects (logbooks) with two users for each project (logbook). The purpose behind the workspace is to give a private user the means to document private projects, e.g. a house or extension. For a more advanced building log (including deviation management) a "Business Workspace" is required.

Project (logbook)

A project (logbook) is used to document the built-in articles in a building, as well as document and manage potential deviations from set requirements.

The Logbook service at BASTA

Below you will find a description of the different logbook functions.

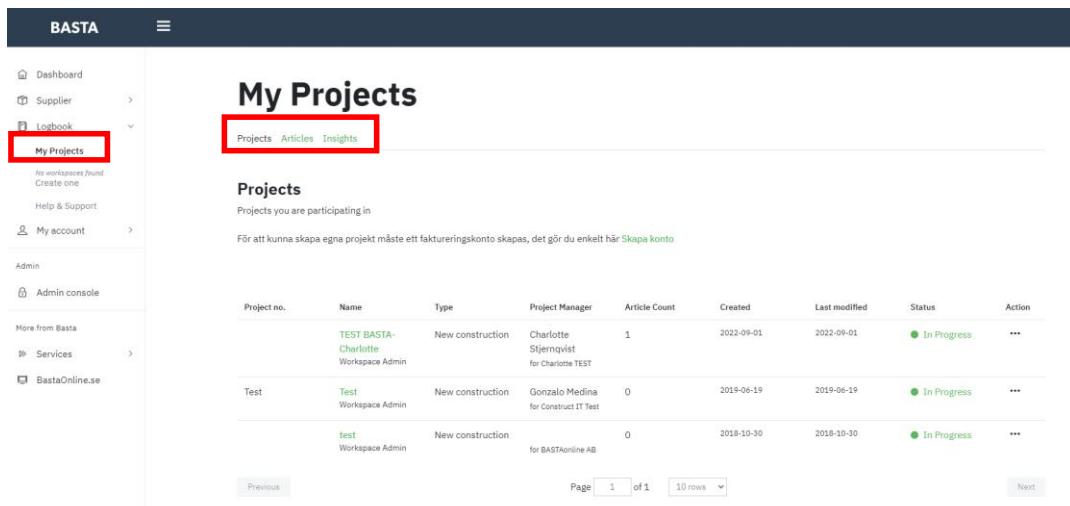

User account at BASTA

You need to create a user account to log into BASTA and use the logbook. Click on "LOG IN" on the BASTA website and choose "register".

My projects

The logbook tools are located under "Logbook" in the left menu.

An overview of all the projects where your user is added as a member can be found under "My projects", regardless of which workspace the project (logbook) belongs to.

Project no.	Name	Type	Project Manager	Article Count	Created	Last modified	Status	Action
	TEST BASTA-Charlotte	New construction	Charlotte Stjernqvist for Charlotte TEST	1	2022-09-01	2022-09-01	In Progress	...
	Test	New construction	Gonzalo Medina for Construct IT Test	0	2019-06-19	2019-06-19	In Progress	...
	test	New construction	for BASTAonline AB	0	2018-10-30	2018-10-30	In Progress	...

On this page you will find three tabs:

- **Projects** – An overview of the projects (logbooks) where you are a member, including project information. Which workspace the project (logbook) belongs to is displayed in the column "Project Manager"
- **Articles** – An overview of all the articles added to the projects (logbooks) where you are a member. A quick search can be conducted here to determine whether a specific article has been used in any of the projects (logbooks) where you are a member
- **Insights** – An overview of statistics and trends of the projects where you are a member.

Workspace

You will find your workspace profile by clicking on "Business Workspace" in the left menu, under "Logbook".

The screenshot shows the BASTAonline AB workspace profile page. The left sidebar has a red box around the 'Business Workspace BASTAonline AB' link under 'My Projects'. The main content area has a red box around the top navigation tabs: Profile, Plan & Billing, Settings, Members, Projects, Articles, and Insights. The 'Profile' tab is selected. The 'Organization details' section contains the following information:

Organization name (Workspace name)	Organization number
BASTAonline AB	556719-5697
Address	Postal code
Box 21060	100 31
City	Phone
Stockholm	08-598 563 00
Homepage	
http://www.bastaonline.se	http:// or https://

On the workspace page you will find the following tabs:

- **Profile** – Manage the organizational details including the workspace name
- **Plan & Billing** – Manage payment plans and billing information
- **Settings** – Manage settings for how users can join the workspace and who should receive billing reminders
- **Members** – This is where workspace members are managed. You can invite new members as well as manage existing ones by clicking on "Action" (the pen to the right of each user)
- **Projects** – Here you can see all the workspace projects (logbooks). They can be opened by clicking on the green text in the "Name" column. In the "Manage" column, you can choose to create a copy of the project (the logbook), transfer ownership to another workspace or delete the project (the logbook) by clicking on the three dots.
- **Articles** – An overview of all the articles in the projects (logbooks) connected to the workspace. A quick search can be conducted here to determine whether a specific article has been used in any of the projects (logbooks) connected to the workspace
- **Insights** – An overview of statistics and trends of the projects belonging to the workspace.

Member roles in a workspace

Members of a workspace can be assigned one of the following roles:

Super Admin

This role gives the user complete administrative rights to the workspace, the role allows the user to:

- Create and remove projects (logbooks) on the workspace
- See and join any open projects (logbooks) on the workspace
- Administer the workspace members
- Administer the workspace profile
- Administer the workspace payment plans and billing information
- Transfer projects (logbooks) to another workspace

Admin

This role allows the user to:

- Create projects (logbooks) on the workspace
- See and join any open projects (logbooks) on the workspace
- Administer the workspace members
- Administer the workspace profile

Member

This role allows the user to:

- See and join any open projects (logbooks) on the workspace

Manage workspaces

Select which workspace you wish to manage if your user is a member of more than one workspace. Click on "Manage workspaces" in the left menu to select the preferred workspace – then click on "Business Workspace" again.

Help & support

Here you will find help and support regarding the logbook service.

Project (Logbook)

A project (logbook) is used to document which articles are being used in a construction project. Articles can be added by all the project's members and categorized by a preferred structure, project deviations are managed and insights about the project can be visualized. A project (logbook) is created within a workspace and on the project overview you will find information about which workspace it belongs to.

In a project (logbook) you will find the following tabs:

Articles

Under the tab "Articles" you will find an overview of all the articles added to the project (logbook).

Structure

The folders in the logbook are displayed in the left menu (if some of the folders are hidden in your project (logbook) it is because they are empty):

- **Pending deviations** – Shows added article deviations that have not yet been managed, for more information regarding deviations see further below
- **Approved deviations** – Shows added and approved article deviations

- **Unapproved deviations** – Shows added and not approved deviations
- **Archived articles** – Shows articles no longer in the project (logbook) that have been archived
- **Uncategorized articles** – Shows articles added to the project (logbook) that have not been placed in a specific “Project”-folder
- **Project** – The users can set up their own preferred structure to organize their added articles within this folder, e.g. by floors or rooms. New folders can be added by clicking on “New folder”. To create a sub-folder open the folder meant to contain the sub-folder and add the new folder the same way. It is possible to change the name of, move, copy, or remove a folder if you select the folder and then click on “More” (top right corner).

Under “Project” all added articles in the project (logbook) can be seen to the right, depending on which folder that is selected. Initially all the added articles are shown.

Add new articles

A new view will open when selecting “Add article”, in this view it is possible to search for an article in the BASTA database as well as choosing the desired article. It is also possible to use the available filters in the left menu to find articles based on e.g. supplier or product name.

If you cannot find the desired article among the registered articles in the BASTA database, it is possible to add an unregistered article by searching in connected databases or by adding the article manually.

- “Search in CCBuild database” – if you click here you get access to [CCBuilds](#) database of reusable products from the CCBuilds marketplace. Through an login you can also access an organizations internal marketplace.
- “Search Finfo database” – if you click here you get access to FINFOs database and can search for articles there and add them to the logbook, the basic information about the article is included, if further information is required you will then have to do a manual input.
- “Add unregistered article” – if you click here, you can add an article manually. For more information we refer to the section “Add unregistered article” further down in this document.

When adding an article to a project (logbook) a copy of the article is created with the information available in the moment the article was added to the project (logbook). When you have chosen an article to be added to the project (logbook) a new view appears.

Search tips

You can search for parts of words using an asterix (*).

- Example: paint* gives a hit on paint removal, paint products, etc.
- *color gives a hit on Wall and ceiling paint, paint, etc.

Article information

The top section of the new view describes the article.

Add deviation

Add deviation

In this section it is possible to add a deviation. Deviations is a tool for marking articles that does not meet the organization's set criteria. Deviations must be approved by a user of the project (logbook) with the role of project manager. Added deviations are shown in the folder structure described above.

If a user clicks on "Add deviation" the following view appears:

Deviation

Title <small>②</small>	Deviation <small>②</small>
<input type="text"/>	<input type="text"/>
Reason <small>②</small>	Justification <small>②</small>
<input type="text"/>	<input type="text"/>

Has attached document

[Save deviation](#)

[Cancel](#)

BASTAonline AB

[www.bastaonline.se](#)

Sida (Page): 10 (23)

Version: 10

Giltig från (Valid from): 2026-01-02

- **Title** – Name the deviation
- **Deviation** – Describe the deviation
Example: The organization requires all added articles to meet the grade ALPHA, but I need to add an article that only meet the BETA
- **Reason** – Reason why the article should be handled as a deviation
Example: There is no articles in this category that meet the grade ALPHA
- **Justification** – Justify why the Project Admin should approve this deviation
Example: There is no available articles that fulfil the grade ALPHA in the required category, and we need this kind of product for the next step of the project, therefore we need this deviation to be approved
- **Has attached document** – highlights that a document has been uploaded under "Document" in the bottom of the article view

Manage deviations:

- **Add new deviations** – All members of a project (logbook) with the role of Project Member or Project Admin can create a new deviation
- **Approve deviations** – Only the members of a project (logbook) with the role of Project Admin can approve deviations
- **Remove deviations** - Only the members of a project (logbook) with the role of Project Admin can remove deviations

Project details

Information about placement in construction, amount, total weight etc. can be added in this section. It is also in this section you can choose which folder the article should be placed into, more information about this is available earlier in this document.

Add unregistered article

If you cannot find a desired article in the BASTA database (registered articles) there are two available ways to manually input an unregistered article instead:

1. Conduct a search in the FINFO database "Search Finfo database". Basic information about the article is included when adding an article through the FINFO database
2. Add the article manually "Add unregistered article". When choosing this option all the article information must be put in manually and all required fields must be filled out.

Under the section "Requirements" it is possible to state whether the article is approved by another certification system or has an ecolabel. The information declared in this section will also be visible in the logbook's overview.

On the right there is a screenshot of the information requested when an unregistered article is added.

Member roles within a project (logbook)

A user can have one of the following roles in a project (logbook):

Project Admin

This role gives the user complete administrative rights to the project (logbook), the role allows the user to:

- View, modify, and remove articles
- Administer project members and project details
- Manage deviations

Project member

This role allows the user to:

- View, modify, and remove articles

Project Guest

This role allows the user to:

- Only view articles

Invite new project members

Only users with a Project Admin role can invite new members to the project (logbook).

Export

It is possible to create exports of the project (logbook) in this section. There are several different versions of exports.

Excel format

There are three different versions:

- One that exports all articles including the information that has been added to the article, for example weight, place in the building, deviations and more. Information about Miljöbyggnad Council and the Taxonomy is also included in this export
- One that exports all articles in a format that simplifies the import to [Byggsektorns miljöberäkningsverktyg](#) (BM). The columns are adapted and labeled to include information from the logbook has to BM for further data processing
- One that exports all articles in a format that simplifies the import to PRODIKTs climate calculation tool. The columns are adapted and labeled to include information from the logbook has to PRODIKT for further data processing

Website (HTML format)

This is a more advanced export format. An export is started by clicking on "Create new export". The user then gets to choose which parts of the project (logbook) that are to be exported. The user can export project information an documentation, article information and documentation, members, insights and more. The exports (zip-files) will be automatically deleted from the project (logbook) after 30 days.

Insights

Project members can in this section view insights (statistics) about articles in the project (logbook). The distribution between articles that fulfil the grades ALPHA, BETA, DECLARED etc., quantities of articles, deviations and so forth.

Project (logbook) status

The project (logbook) can have one of the following statuses:

- **In progress** – The status that the project (logbook) automatically gets when it is created. The members of a project (logbook) with this status can modify articles and documentation, depending on their role in the project (logbook)
- **Archived** – The members of an archived project (logbook) can no longer modify anything within the project (logbook)
- **Suspended** – If the workspace that the project (logbook) belongs to have been archived, all the projects (logbooks) attached to the workspace will be suspended. The members of a suspended project (logbook) will no longer have access to the project (logbook).

Manage deviations

If a deviation is added to an article an e-mail, containing the information that a deviation is waiting to be managed will be sent out to members of the project (logbook) with the role of Project Admin. For more information on how to add a deviation please see the section "Add deviation" further up in this document. Not yet managed deviations can also be seen in the folder "Pending deviations" in the "Articles"-section.

Open the concerned article and scroll down to the section "Deviation" to manage the deviation. This section also shows who the deviation was added by, and any information provided, as well as an opportunity to leave a comment about why the deviation is approved or not approved.

Deviation

Added by Charlotte Stjernqvist PENDING

Title ⓘ	Deviation ⓘ
Test11	No documentation about chemical content
Reason ⓘ	Justification ⓘ
Not possible to get information from the supplier	Only available choice
<input checked="" type="checkbox"/> Has attached document	
Comment ⓘ	
X Delete deviation Approved Not approved	

- **Delete deviation** – If a deviation is deleted it will be removed from the article, this cannot be regretted
- **Approved** – If a deviation is approved the article will appear in the folder "Approved deviations"
- **Not approved** – If a deviation is not approved the article will appear in the folder "Unapproved deviations".

Transfer a project (logbook)

It is possible to transfer project ownership from one workspace to another. This can be relevant if e.g. a building has been sold.

Conditions for the transfer of a project (logbook)

The following requirements must be met to perform a project (logbook) transfer:

1. The user who initiates the transfer of the project (logbook) must have the role of Super Admin on the workspace to which the project (logbook) belongs
2. The user who receives the transferred project (logbook) must have the role of Super Admin on the workspace to which the project (logbook) is being transferred.

Initiate the transfer of a project (logbook)

To start the transfer of a project (logbook) the following steps will have to be performed:

1. Go to the section “Projects” in the workspace
2. Click on the three dots in the column “Action” by the project (logbook) that is to be transferred
3. Add the E-mail to the user that is to receive the project (logbook) and then click on “Transfer ownership”.

Approve the transfer of a project (logbook)

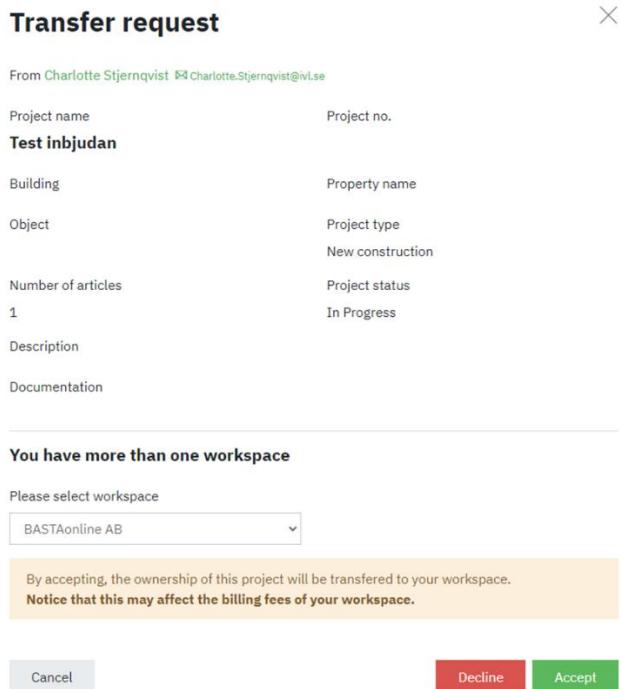

To approve the transfer of a project (logbook) the following steps will have to be performed:

1. The receiving user goes to the section "My projects" in the left menu
2. The transferred project (logbook) will appear under the headline "Transfer request", the receiving user can open the transfer by clicking on the three dots in the column "Action" and then choose "Open transfer".

The screenshot shows the 'My Projects' section of the BASTAonline AB platform. On the left, a sidebar menu includes 'Dashboard', 'Supplier', 'Logbook', 'My Projects' (which is highlighted in red), 'Business Workspace BASTAonline AB', 'Manage workspaces', 'Help & Support', 'My Account', and 'Admin'. The main content area is titled 'My Projects' and shows a 'Transfer request' table. The table has columns for Project no., Name, From, E-mail, Received, Status, and Action. One row is listed: 'Test inbjudan', 'Charlotte Stjernqvist', 'Charlotte.Stjernqvist@ivl.se', '2022-09-14', 'Pending', and 'Action' (with 'Open transfer' and 'Decline' buttons). Below the table are 'Previous' and 'Page 1 of 1 20 rows' buttons.

3. A new window now opens where information regarding the project (logbook) is displayed. If you are a member of more than one workspace you can choose which of your workspaces the project (logbook) should be transferred to. In the bottom right corner you can approve or decline the transfer of the project (logbook).

The screenshot shows a modal window titled 'Transfer request'. It displays project details: Project name 'Test inbjudan', Project no. '1', Building 'Building', Property name 'Property name', Object 'Object', Project type 'New construction', Number of articles '1', Project status 'In Progress', and Description 'Description'. Below this, a section titled 'You have more than one workspace' asks 'Please select workspace' with a dropdown menu showing 'BASTAonline AB'. A note states: 'By accepting, the ownership of this project will be transferred to your workspace. Notice that this may affect the billing fees of your workspace.' At the bottom are 'Cancel', 'Decline' (red button), and 'Accept' (green button) buttons.

When these steps have been performed the project (logbook) will be transferred to the receiving user's workspace.

N.B.! The existing members of the project (logbook) and their project roles will remain after the completed transfer of the project (logbook) to the new workspace. When the transfer is completed the administrators of the new workspace can remove or replace the project's (logbook's) members and roles.

How is the Logbook service priced?

The cost for using the logbook is based on:

- Which kind of workspace you have selected for your projects (logbooks)
- The number of projects (logbooks) in your workspace
- The projects (logbooks) statuses

For workspace "Organization Plus" a fixed annual fee is paid, but for "Organization" you pay per logbook and year. Please see the BASTA webpage for further details, [Logbook service | BASTA \(bastaonline.se\)](https://www.bastaonline.se).
